

Context Diagram

Sunday, April 3, 2022 3:53 PM

A context diagram, also known as a Level-0 data flow diagram, is a graphical diagram that shows the flow of data through a system. It is considered the highest level in a data flow diagram. The diagram is used to understand the boundaries of the system and details involved with it. The diagram includes a bubble that signifies the context of the system and external entities that are involved or influenced by the system.

I used SmartDraw for my diagram and took the focus of my system, which was scheduling lessons, as my context. I know the main external entities involved with the registration system would be the customer who will view the contents of the lesson and choose the lesson. The trainer can confirm the lessons and decide to either accept or reject the lesson. All of this will go through a process consisting of the details of the lesson. It will also display the lesson information to the user.
